Step 1 MEASURING UP

Measure and mark off a vertical line on the back wall for the positions of the partitions. The mark on the wall the positions to fix the 3 brackets.

Step 2 FITTING BRACKETS

Fix 3 channel brackets required for each partition on the vertical line drawn on the wall.

Step 3 FITTING PARTITIONS

Ensure the partition is level and fix brackets to the partition using the t-nuts provided.

Step 4 FITTING FASCIA

Mark off the positions of the 3 brackets on the fascia. Fix the channel brackets to the fascias the fix to the end of the partition.

Step 5 FITTING PARTITION SUPPORT

Attach the support leg to the partition and adjust to the correct height. Ensure the partition is aligned correctly and fix the support to floor.

Step 6 FITTING HEADRAIL

With the partitions and fascias fixed, the head rail must be placed in position over the tops of the fascias bridging the door gap. Fix the head rail permanently by attaching to the fascia.

Step 7 FITTING THE DOOR, HINGES AND LOCK ASSEMBLY.

Attach the hinges to the fascia and door ensuring the door is hung horizontal. Then attach the indicator bolt to the door. Engage the lock and mark off on the fascia the point to attach the keep. Unlock the indicator bolt and attached the keep using the fixings provided.
